

# CAF Performance Test Suite

## Performance results

This article puts forth some of the NPB performance results from the benchmarks in this test suite. The CAF implementations tested include - OpenUH (v3.0.x) (over GASNet and ARMCI), Intel (v13.1) and G95 (v0.93). The following graphs compare the total execution time of each of the tests (y-axis) with the number of images used to run them (x-axis).
